

# **Syntactic Analysis (Practice)**

**ICS312  
Machine-Level and  
Systems Programming**

Henri Casanova ([henric@hawaii.edu](mailto:henric@hawaii.edu))

## (q1) CFG

- Write a CFG for the language of strings that contain an odd and  $\geq 1$  number of a's
  - a, aaa, aaaaa, ..

# (q1) Solution

- Write a CFG for the language of strings that contain an odd and  $\geq 1$  number of a's
  - a, aaa, aaaaa, ..

$$S \rightarrow aa S \mid a$$

## (q2) CFG

- Write a CFG for the language of all strings that consist of  $n$  a's, then 1 b, and then  $n$  a's (e.g., b, aba, aabaa, aaabaaa)

## (q2) Solutions

- Write a CFG for the language of all strings that consist of  $n$  a's, then 1 b, and then  $n$  a's (e.g., b, aba, aabaa, aaabaaa)

$$S \rightarrow a S a \mid b$$

Note the recursion here that “book ends”  $S$  with two a's, one of the left and one on the right

## (q2) **WRONG Solutions!!**

- Write a CFG for the language of all strings that consist of  $n$  a's, then 1 b, and then  $n$  a's (e.g., b, aba, aabaa, aaabaaa)

### **COMMONLY WRONG SOLUTION**

$S \rightarrow A b A$

$A \rightarrow Aa \mid \text{epsilon}$

This is the same as Regex:  $a^* b a^*$

## **(q3) CFG**

- Write the CFG over the alphabet  $\{a,b\}$  that describes all strings that are palindromes

## (q3) Solutions

- Write the CFG over the alphabet {a,b} that describes all strings that are palindromes

$S \rightarrow \text{epsilon} \mid a \mid b$

$S \rightarrow a S a$

$S \rightarrow b S b$

## (q4) CFG

- Write a CFG over the alphabet  $\{0,1\}$  that describes all strings that end with a sequence of  $n$  0's and  $n$  1's (for any  $n > 0$ )
  - example: 010110100010101**00001111**
  - example: **000000111111**

## (q4) Solutions

- Write a CFG over the alphabet  $\{0,1\}$  that describes all strings that end with a sequence of  $n$  0's and  $n$  1's (for any  $n > 0$ )
  - example: 010110100010101**00001111**
  - example: **00000001111111**

$$S \rightarrow A B$$

$$A \rightarrow 0 A \mid 1 A \mid \varepsilon$$

$$B \rightarrow 0 B 1 \mid 01$$

## (q5) CFG

- Write a CFG for the language of well-formed parenthesized expressions
  - $()$ ,  $(())$ ,  $()()$ ,  $((())())$ ,  $((()))()$ , etc.: OK
  - $()$ ,  $)()$ ,  $((()$ ,  $((()$ , etc.: not OK
- This is a “do you really understand recursion?” test :)

## (q5) Solutions

- Write a CFG for the language of well-formed parenthesized expressions
  - $()$ ,  $(())$ ,  $()()$ ,  $((()()))$ ,  $((()))()$ , etc.: OK
  - $()$ ,  $)()$ ,  $((()$ ,  $((()$ , etc.: not OK

$$S \rightarrow '()' \mid SS \mid '('S)'$$

## (q6) CFG

- Write a CFG for the language of all strings over alphabet  $\{a,b\}$  that consist in sequence of  $n$  a's,  $m$  b's, and  $n$  a's, where
  - $n$  is a  $>0$  integer
  - $m$  is a  $\geq 0$  even integer

## (q6) Solutions

- Write a CFG for the language of all strings over alphabet  $\{a,b\}$  that consist in sequence of  $n$  a's,  $m$  b's, and  $n$  a's, where
  - $n$  is a  $>0$  integer
  - $m$  is a  $\geq 0$  even integer

$S \rightarrow a S a \mid a B a$

$B \rightarrow \text{epsilon} \mid bbB$
